

EXADEL

WE ARE HIRING

Middle Full Stack Developer

We are currently looking for an **Middle Full Stack Developer** to join our innovative team!

About Our Customer:

The customer is a leading provider of vehicle lifecycle solutions, enabling the companies that build, insure, repair, and replace vehicles to power the next generation of transportation.

About Our Project

The project - Safekeep is a business unit that focuses on automating insurance claim subrogation for auto, workers compensation, property, and general liability claims. SafeKeep provides a digital platform for carrier-to-carrier collaboration to standardize and streamline the interaction.

Requirements:

- 2+ years of professional software development experience (excluding internships)
- 2+ years programming experience with Python or Node.js for backend, with React or Vue.js for frontend.
- You might be less experienced with either backend or frontend — it's okay. We're looking for a strong competence in at least one of the technologies and solid understanding of the second language. The willingness to apply both of them in your work, expanding your professional horizons and striving for improvement and excellence, this is what we are really looking for.
- Strong communication skills sufficient for success in a remote and largely asynchronous work environment.

EXADEL

- Demonstrated capacity to clearly and concisely communicate about complex technical, architectural, and/or organizational problems and propose thorough iterative solutions
- Experience with performance and optimization problems and a demonstrated ability to both diagnose and prevent these problems
- Experience owning a feature from concept to production, including proposal, discussion, and execution
- Self-motivated and self-managed with strong organizational skills

Nice to have:

- Bachelor's degree in Engineering, Mathematics, or a related technical discipline
- Master's degree in computer science, mathematics, statistics, or other quantitative fields
- Background in financial services including banking, insurance, or an equivalent
- Familiarity with AWS services such as EC2, DynamoDB, RDS, AWS Lambda, and Amazon SageMaker
- Experience with design, development, deployment, and maintenance of scalable backend services and pipelines
- Proficient with software design approaches and UX patterns
- Understands how to optimize the delivery of code and assets to a browser or device
- Ability to achieve stretch goals in a highly innovative and startup-like environment

English level:

Intermediate +

Responsibilities:

- Design, build, and maintain web applications leveraging cutting-edge frontend design methodologies and UX patterns to create low-latency, secure, and reusable software for our mobile and web-based UIs to provide immersive and elevated customer experiences
- Design, build, and maintain secure, and highly scalable Restful APIs leveraging cloud technologies and serverless to support our SaaS product offerings including web/mobile applications, integration with both internal and external services, and partners
- Collaborate with Product Management and other stakeholders within Engineering (e.g., UX) to maintain a high bar for quality in a fast-paced, iterative environment
- Build code that meets internal standards for style, maintainability, and best practices for a high-scale web environment. Maintain and advocate for these standards through code review
- Develop features and improvements to customers' products in a secure, well-tested, and performant way. Ship small features and improvements with minimal guidance and support from other team members. Collaborate with the team on larger projects
