

# EXADEL

# WE ARE HIRING

## Senior DevOps (AWS)

We are currently looking for an **Senior DevOps (AWS)** to join our innovative team!

### About Our Customer:

**The customer** is a leading provider of vehicle lifecycle solutions, enabling the companies that build, insure, repair, and replace vehicles to power the next generation of transportation.

### About Our Project

**The project** - Safekeep is a business unit that focuses on automating insurance claim subrogation for auto, workers compensation, property, and general liability claims. SafeKeep provides a digital platform for carrier-to-carrier collaboration to standardize and streamline the interaction.

### Requirements:

- 5+ years of experience as a technical specialist
- 2+ years of hands-on experience in programming in languages such as Python, Ruby, Go, Swift, Java, .Net, C++, or similar object-oriented language
- Experience with automating cloud-native technologies, deploying applications, and provisioning infrastructure
- Hands-on experience with Infrastructure as Code, using CloudFormation, Terraform, or other tools
- Experience developing cloud-native CI/CD workflows and tools, such as Jenkins, Bamboo, TeamCity, Code Deploy (AWS), and/or GitLab
- Hands-on experience with microservices and distributed application architecture, such as containers, Kubernetes, and/or serverless technology
- Experience with the full software development lifecycle and delivery using Agile practices

EXADEL

- Demonstrated capacity to clearly and concisely communicate about complex technical, architectural, and/or organizational problems and propose thorough iterative solutions
- Experience with performance and optimization problems and a demonstrated ability to both diagnose and prevent these problems
- Experience owning a feature from concept to production, including proposal, discussion, and execution
- Self-motivated and self-managed with strong organizational skills
- Strong communication skills sufficient for success in a remote and largely asynchronous work environment

### **Nice to have:**

- Experience with Chef, Puppet, Salt, or Ansible in production environments
- Knowledge of IP networking, VPN's, DNS, load balancing, and firewall
- Experience with monitoring and log aggregating frameworks such as Kafka, Logstash, Splunk, Elasticsearch, and Kibana
- Experience implementing and designing cloud-native security concepts, DevSecOps, or MLOps
- Experience with iOS and/or Android app operations and deployment
- Familiarity with AWS services such as EC2, DynamoDB, RDS, AWS Lambda, and Amazon SageMaker
- Bachelor's Degree or 5+ years of professional experience

### **English level:**

Intermediate +

### **Responsibilities:**

- Design, build, and administer development operations processes, and tools including version control, security scanning services, CI/CD pipelines, release engineering, and production deployments of core platform components
- Troubleshoot, diagnose, and fix production software issues, develop monitoring solutions; perform software maintenance and configuration; implement the fixes for internally developed code; query SQ /NoSQL data stores to identify and remediate production issues related to infrastructure (network, storage, compute, and databases) and application operations
- Design and build internal tools to support development and operations including an internal dashboard, performance testing automation, infrastructure, and cost optimization in the cloud
- Work alongside Software Engineers supporting operations, ensuring the team delivers the best experiences for our customers
