

EXADEL

WE ARE HIRING

Lead Java Developer

We are currently looking for an **Lead Java Developer** to join our innovative team!

About Our Customer:

The customer is the leading European provider of e-tendering, procurement systems, and information between buyers and suppliers. The European government is a major user of their services.

About Our Project

The project - the customer is acquiring new systems as part of consolidating the market, and all these systems have to be united into a future platform. Some will continue as is, while others need modernization. There are also areas that need individual parts carved out or need to be rebuilt from scratch using a better architecture. We will also need to upgrade customers to a future better platform before sunsetting the old one. Despite all these different approaches, almost all of them have to talk together, either temporarily or permanently.

Requirements:

- 5+ years of Java experience
- 6+ years of experience with Java
- Strong knowledge of Java/Kotlin
- 6+ years of experience with React (micro frontends)
- Strong knowledge of Java (backend)
- Experience with microservices architecture
- Experience with Kafka
- Experience with Elastic
- Knowledge of AWS
- Experience in working with modern CI/CD tools and related ecosystem of applications
- Strong hands-on knowledge of using Docker, GitHub actions, Terraform, Kubernetes

EXADEL

- Experience writing technical design documents
- Strong written and verbal communication skills
- Experience in leading teams to develop high-quality and secure solutions to fulfill functional and non-functional requirements
- Pragmatic approach to balancing process and flexibility in achieving objectives
- Excellent organizational skills including the capacity to self-manage, structure work, set priorities, and meet deadlines

English level:

Intermediate+

Responsibilities:

- Produce code using Java best practices
- Develop the front and back end of the project
- Collaborate with the cross-functional development team to bring static designs and prototypes to life, providing constructive feedback to optimize implementation and usability
- Provide solutions to technical problems of varying scope and complexity
- Collaborate with management to determine priorities and risks associated with projects
- Ensure all relevant processes, procedures, and product documentation is up-to-date
- Participate in all aspects of the product, including design, development, deployment, and maintenance
